

# its dermasafe

A continually evolving range of adhesives, specially formulated and approved for direct skin contact.

Itac has been successfully developing adhesives and coatings which are 'skin safe' for many years. By creating innovative formulations and working to specific functional requirements the company has established a reputation for assisting its customers in manufacturing products to British Pharmacopeia standards.

We have utilised our knowledge and experience to create our **its dermasafe** range of skin contact adhesives and coatings. These medical adhesives utilise zinc oxide and hypo allergenic technology and are suitable for use with a wide range of substrates including EAB, PVC, cotton, PE film and zinc oxide tape.

**its dermasafe** adhesives and coatings are anti-microbial. They allow transdermal medication and can be aerated during application, to improve breathability. They are specially formulated to allow easy removal and release. Each product in the range is an approved formulation suitable for specialist use - for example, podiatry, veterinary and the treatment of sporting injuries.

# ITSdermasafe

Brand Name	Description	Usage	Key Features	Key Benefits
<b>ITSdermasafe ZnO</b>	Solvent-borne Natural Rubber Pressure sensitive Medical grade adhesive	Wound management Elasticated adhesive bandage Zinc oxide tape PVC waterproof dressing Sports injuries Bandage support	Skin contact approved Direct skin contact Water resistant Trans dermal High grab Flexible Food & Hygiene compliant Supports sterilisation	Allows direct skin contact Washable / waterproof Suitable for range of substrates Applying medication Supports compression Supports fabric conformity to body and limb
